NEW ORLEANS, LOUISIANA - *Bringing New Capabilities to the Big Easy*

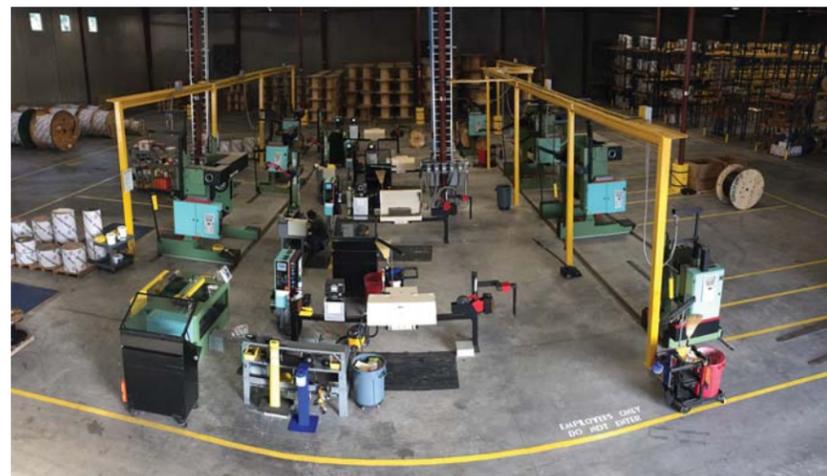

Our modern warehouse (top left and right photos) can now stock the cable for the growing needs of our customers.

Okonite continues our long-standing commitment to maintain inventory and to provide specialized customer services. In response to our customer needs, we are pleased to announce the opening of our new Service Center in New Orleans, LA. This cutting-edge 81,000 square foot facility with four state-of-the-art cable cutting lines will enable us to stock more cable locally, allow for faster turnarounds, and provide additional services in project cable management.

This latest expansion is an investment in our customers. Okonite continues to expand our production and warehousing facilities so that we can provide for your increasing cable needs in the most efficient and timely manner.

The Service Center was completed in July of 2018. The following benefits will be realized as a result of the increased square footage, larger reel size and weight limits, latest technology, and added employees in the new facility:

State-of-the-art cutting equipment to handle any request.

- More cable available when you need it
- Better equipped to respond to growing customer demands
- More cuts made and released to your schedule
- Job measured lengths resulting in reduced waste
- Greater variety of cable to fill the needs for Industrial and Utility markets
- Continued lower LTL cost of freight – local shipments will save you money

These and other benefits should translate into continued excellent service and reduced overall cost to our customers. This is our response to those who have placed their confidence in Okonite reliability and customer service. You can count on the Okonite team to continue responding to all of your cable needs.

Large comfortable conference room for customer training and meetings.

Loading docks with the latest technology for rapid handling of all orders.
